LFD259: Kubernetes for Developers

HashiCorp Certified: Terraform
Associate

LFS258: Kubernetes Fundamentals

Deploy containers by using Azure
Kubernetes Service

LFS253: Containers Fundamentals

Anas BENSTITOU

DevOps | Cloud Engineer
France

Summary

I am a DevOps and Cloud Engineer with a strong focus on delivering
flexible, efficient, and secure cloud solutions. With expertise in
Terraform and Kubernetes, I help businesses automate their
infrastructure, streamline their deployment processes, and achieve
continuous delivery in their cloud environments.

My experience on Azure, where I have successfully designed
and managed cloud architectures using Infrastructure as Code
(IaC) principles. I bring a deep understanding of Terraform to
automate infrastructure provisioning, and Kubernetes to orchestrate
containerized applications, ensuring your systems are always
available and highly scalable.

Beyond cloud and DevOps, I am also skilled in Python and Java
development, enabling me to offer backend solutions using APIs
that are optimized from the ground up. I can assist with building
robust applications, setting up CI/CD pipelines, and integrating
cloud services, all while maintaining best practices for security,
performance, and scalability.

If you're looking for a reliable DevOps and Cloud Expert to help you
navigate your cloud journey, automate your infrastructure, or develop
modern web applications, let's connect and turn your vision into
reality. I'm committed to delivering high-quality results tailored to your
business needs.

Experience

AXA Group Operations
DevOps / Cloud Engineer
July 2024 - Present (3 months)
Ville de Paris, Île-de-France, France

BNP Paribas
